

COVID-19 BARRIERS FOR OFFICE & RETAIL

During the COVID-19 pandemic, providing a safe workplace has never been more critical. Employers must identify where, and how, their employees might become exposed to COVID-19 transmission, and mitigate it.

After conducting a thorough risk assessment of communal office spaces, such as desks, meeting rooms, the cafeteria or lunch room, reception, and routes of entry and exit, safety devices need to be put into place.

Workplaces can install acrylic barriers or partitions to physically separate customers and employees, thereby reducing transmission risk.

Concierge / Reception Barriers

Front line staff such as hotel concierges, receptionists, and customer representatives need full protection as they are your first point of contact. Installing clear, acrylic barriers will help keep employees and customers safe. The full visibility barrier can be mounted with pre-drilled holes or two-sided tape, blending in with the existing décor for a low cost solution.

Retail Shields / Barriers

A high contact and risky activity for retail businesses is when customers pay for purchases. Retail Shields offer a simple solution. By having a pass-through window cut out at the bottom, customers easily slide through cash, change, receipts and loyalty cards without contact. This makes transactions safe at restaurants, take out counters, grocery stores, drive thrus, and pharmacies.

Office / Desk Partitions

Installing clear partitions is one of the best ways to protect office workers from exposure to COVID-19. One Imaging provides this excellent quick fix to your current seating plans without making any major modifications. Clear office dividers and partitions can be quickly added to existing desks, tables, and modular panels to create barriers between workers. Enjoy a custom fit to any office furniture configuration.

Corrugated Temporary Protection / Counter Shield

By placing a large, clear, polyester window barrier between people, the shield will protect workers and clients from airborne particles. Being a temporary product, the paper corrugated structure can be personalized and moved anywhere to create a safety barrier.
